Dear Colleagues,

The traditional spring meetings of the German Society for Biochemistry and Molecular Biology (GBM) are held annually in the picturesque town of Mosbach to promote the exchange of scientific ideas and to foster the education of young scientists. The scientific theme of the 66th meeting is “Metals in Biology: Cellular Functions and Diseases”.

Metals such as iron, copper, molybdenum, manganese and zinc participate in many biochemical and cell biological processes. More than 40% of the cellular proteins bind a functionally critical metal or metal-cofactor. Hence, acquisition, intracellular distribution, and protein insertion of metals are essential for cell viability. Conversely, unbound metals are toxic, thus requiring sophisticated regulatory systems to assure adequate cellular uptake, storage and export. All these processes are accomplished by a plethora of specific membrane transporters, metal-sensing hormones, dedicated metallochaperones, biogenesis and assembly factors, and metal-storage proteins. Together they form a complex network that is essential for cellular metal homeostasis. Malfunctioning of these processes, however, leads to severe cellular dysfunctions and detrimental human diseases with, e.g., neurodegenerative or hematological phenotypes.

At the meeting, emerging new concepts of metal biology will be discussed by leading experts covering the topics of the cellular regulation, transport, and protein insertion of metals. The speakers will also describe the roles of metals in energy production, cofactor biosynthesis, enzyme function, and various fatal diseases.

We look forward to seeing you in Mosbach.
Roland Lill, Ralf R. Mendel and Martina Muckenthaler

The Lynen Lecture is named after the famous German biochemist Feodor Lynen. He had a major impact on the development of biochemistry after the Second World War. His studies were devoted to the understanding of chemical details of metabolic processes in living cells and he was very supportive and active in Science politics.

His work connected chemistry, medicine and biology and he strongly promoted the connection of German scientists to colleagues in the United States, Israel, Japan and China. And Feodor Lynen has been the vice president of the GBM from 1953 – 1956.
